Ben,
Here is the general language. Feel free to edit it for consistency with the rest of the document. Let me know if you have questions.

In June 2016, both the EPA and the Department of Energy (DOE) conducted aerial overflights of the Site to determine the possibility of lateral spread of the radiation contamination. The DOE overflight indicated potential lateral spread to the west of the Site along Kisco Avenue. The EPA overflight indicated two other potential areas of concern. One area was located immediately southeast of the Site off North Moger Avenue and the second approximately one half mile southwest of the Site located within the parking lot of Diplomat Towers (a residential condominium complex).

Dan

Good morning Dan,

The comments you made regarding the Phase III Removal Assessment Trip Report have been addressed. I will complete and send you the report as soon as I receive the narrative for the aerial overflight.

Thanks,

Ben Nwosu
